MSc Environmental Dynamics and Climatic Change

This full-time (or part-time) postgraduate course is an exciting new opportunity to acquire the key scientific knowledge and skills required for a career in the environmental sector, or for higher-level postgraduate training, within a society increasingly aware of human impacts upon the environment. The MSc builds on the School's reputation for world-class research and teaching focused upon the responses of physical environmental systems to climatic change and the implications for society.

Core Modules

Essential modules examining the response of environmental systems to climatic change together with key science and analytical skills

Optional Modules

A comprehensive range of modules focusing on developing expertise in ecosystem dynamics, modelling, environmental sustainability, risk assessment, environmental management and legislation

Research Project

A written dissertation based upon an individual research project
