POPULATION DATA SCIENCE SUMMER INTERNSHIP PROGRAMME 2026

Start your career in data science!

About our award-winning team

Who we are

Population Data Science at Swansea University is a cutting-edge research centre based in Swansea University Medical School, Faculty of Medicine, Health & Life Science. Specialising in secure-linked data analysis of health, social and other administrative data sources.

**WE ARE
PIONEERING
POPULATION
DATA SCIENCE**

What we do

Our award-winning team are focused on delivering a world-class technology infrastructure to tackle some of the biggest challenges facing today's society and enable opportunities - creating a global research ecosystem with the potential to produce educational, environmental, economic, and societal impact.

Our research projects

Our team is involved with various projects and research programmes, conducting different methodological and applied skills across multiple disciplines to support and achieve our world-leading innovations. These skills include but are not limited to software development, database development and management, epidemiology, statistics, data mining, data visualisation, web development, project management, patient public and stakeholder engagement and Geographical Information Systems.

**Data
Science
Building**

**Swansea
University**

Why should you apply to our internship programme?

- 1 **Gain work experience** with an award-winning team at the forefront of global population data science research.
- 2 **Develop new skills** with real-world data analysis to develop and apply your skills in this highly secure, state-of-the-art environment.
- 3 **Explore a career path** in Population Data Science and find out what fits you best.
- 4 **Gain confidence with** our internship programme. It is a perfect way to help you gain experience transitioning from university to full-time employment. You can gain valuable insights and knowledge, participate in meetings, and perform assigned tasks in a real-world setting.
- 5 **Network and work alongside a team of highly skilled professionals** including your supervisors and mentors you meet during your internship, who can be valuable references as you pursue a full-time job.
- 6 **Build a strong CV** and give yourself a head start with the internship.
- 7 Some interns have become **full-time employees**: Kellie Robinson and Rowan Dash from our 2023 intern cohort, both secured full-time positions in the SERP team at Population Data Science after their internships. [Find out more about their journey here.](#)
- 8 **Paid employment for 12 weeks**, including annual leave entitlement.
- 9 The programme culminates in the **Showcase Event** with an opportunity for interns to present their projects. [Check out the highlights from last year's Showcase event in this video.](#)

Population Data Science Internships

Project 13

Title: Rethinking hEalth policy in Multimorbidity (REMIT)

Summary: This internship will support a Health and Care Research Wales (HCRW)-National Institute for Health and Care Research (NIHR) funded project which aims to develop new methods to assess emerging treatments, such as GLP-1 inhibitors (e.g. Mounjaro and Ozempic), for people living with multiple long-term conditions (multimorbidity). This new approach will allow healthcare decision-makers to make the best use of available resources to improve patient care across a number of long-term health conditions. Health records for the population of Wales living with multiple long-term conditions will be used to assess how diseases such as Chronic Kidney Disease, Type 2 Diabetes and Obesity accumulate and develop over time, and the impact of this accumulation on patients. This framework will be further developed to incorporate information from clinical trials of emerging treatments, including GLP-1 inhibitors, to estimate the effect of treatment in people living with multiple long-term conditions and associated cost-effectiveness.

The successful candidate for this internship will primarily be involved in reviewing papers for a systematic review on the effects of GLP-1 inhibitors for Chronic Kidney Disease, Type 2 Diabetes, and Obesity. This role also includes the opportunity to contribute to updating a systematic literature review and/or gain experience in conducting meta-analyses.

Outcome by the end of 12 weeks

- Systematic literature reviews.
- Data management.
- Communication of research findings.
- Project management.
- Data analysis.

Skills/ background suited

Essential

- Experience in literature reviews
- Experience in handling and analysing data.

Desirable

- Experience in meta-analysis.
- Experience of statistical software (e.g. Stata, R, SPSS, etc.).

The centres supporting this year's programme

SAIL Databank

SAIL Databank is a safe haven for billions of person-based records, which enables researchers to answer important questions for the benefit of society. Researchers can access a broad range of routinely collected data spanning up to 30 years from an entire population.

SAIL Databank achieves this by working collaboratively with data guardians, academics, regulators, members of the public, practitioners, and policymakers from Wales, across the UK and internationally.

The SAIL Databank holds de-identified data in linkable form and, following further safeguards, makes selected data available for analysis in anonymised form. Approved researchers can access the data remotely anywhere in the world, complete with analysis tools. Because the data accessed for research is anonymised, the work is carried out without researchers knowing the identities of the individuals represented.

SeRP

Secure eResearch Platform (SeRP) is the complete customisable solution for data sharing, linkage and analysis in a safe, secure and controlled environment that's accredited to the highest international standard. It does this in a governed environment allowing data owners to remain in full control at all times.

SeRP is the perfect solution for any organisation that has accumulated a large amount of data, that intends to share that data for the purposes of research and long term benefit to society, and that wants to do so in the most secure and safe way possible to reduce associated risks. SeRP can benefit sectors including healthcare, governments, academic Research, industry, charities & Not-for-profit organisations.

For more information on the benefits of SeRP, visit [SeRP Benefits](#).

The centres supporting this year's programme

ADR Wales

ADR Wales (Administrative Data Research Wales) unites specialists in each field from Population Data Science at Swansea University and the Wales Institute of Social and Economic Research and Data (WISERD) at Cardiff University with statisticians, economists and social researchers from Welsh Government.

The partnership is ideally placed to maximise the utility of anonymous and secure data to shape public service delivery, which will ultimately improve the lives of people in Wales. The work carried out by the ADR Wales team covers areas such as early years, education, skills and employability, health and well-being, housing and homelessness, social care, mental health, social justice, climate change and major societal challenges.

Dementias Platform UK

Dementias Platform UK

Dementias Platform UK Data Portal brings together records of over 3 million people in a free-to-access resource.

Researchers can use the portal to identify which cohorts are relevant to them, apply for access to the data and then analyse it in a secure, remote environment complete with data linkage and analysis packages.

The portal brings the records together, ensures they are secure, supports data linkage studies using phenotypic, genomic, and imaging data, and makes them readily available for the benefit of academia, industry, regulators, health care providers, patients, and the public.
